

Digital Services

We build great digital products

We craft powerful, easy-to-use digital products that optimize your core processes. Our delivery capability accelerates your business outcomes. We provide the strategy, design, development and managed services as a full omnichannel service. We work with multi-disciplinary teams of UX/UI & Architect Experts, Developers, Testers and Support Engineers.

Our value stream

We provide customer outcomes through:

Ideate

Business Solutions

We quickly convert ideas to designs and prototypes to test business goals and requirements.

Create

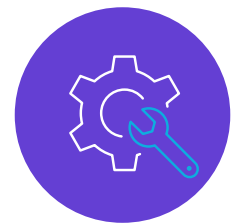

Digital Products

For those that need to implement a new solution, deliver an MVP or digitize a well-defined scope.

Operate

Digital Factories

Using a DevOps approach, we develop, maintain and support all your applications landscape.

Our most used Digital Services

Our goal is to make companies future-proof by optimizing and digitalizing their core processes, in evergreen digital products and here is how we can help you.

What is it

How we go about it

Design Thinking (Expert service)

You want to understand, visualize and verify if a concept will address your challenges.

We do the ideation of the application by identifying business goals, personas, main processes, top use cases, and wireframes. We engage with all stakeholders to get the project buy-in.

Minimal Viable Product

Develop and release to the end-users the most valuable features in a short timeframe, delivering immediate value to your business.

Our multi-disciplinary team builds the MVP using Agile methodology, in a time box approach with refined User Experience and Quality.

Digital Factory

You want to innovate the way you deliver software to your stakeholders and users. Your IT needs to create and maintain solutions with flexibility on roles and team capacity.

Embrace a continuous delivery model, putting in practice a DevOps strategy. Combine new solutions with evolution maintenance. Adjust team composition to best fit the needs of your IT team.

Support Plan (Managed service)

You don't have a team to manage applications in production or the platform runtime. We ensure your business continuity by supporting application up-time and incident resolution.

Incident resolution. Identify and correct problems and restore normal service operation. Platform maintenance and Upgrades. Regular reviews of infrastructure and application performance. Application monitoring.
